

SQUARE COLUMN INSTALLATION INSTRUCTION

TOOLS

Screw Gun, Caulking Gun, Measuring tape, PL Adhesive, Screws, Sanding paper, Jig Saw, Blocks of wood (2x4), Caulk, Touch Up Paint Kit

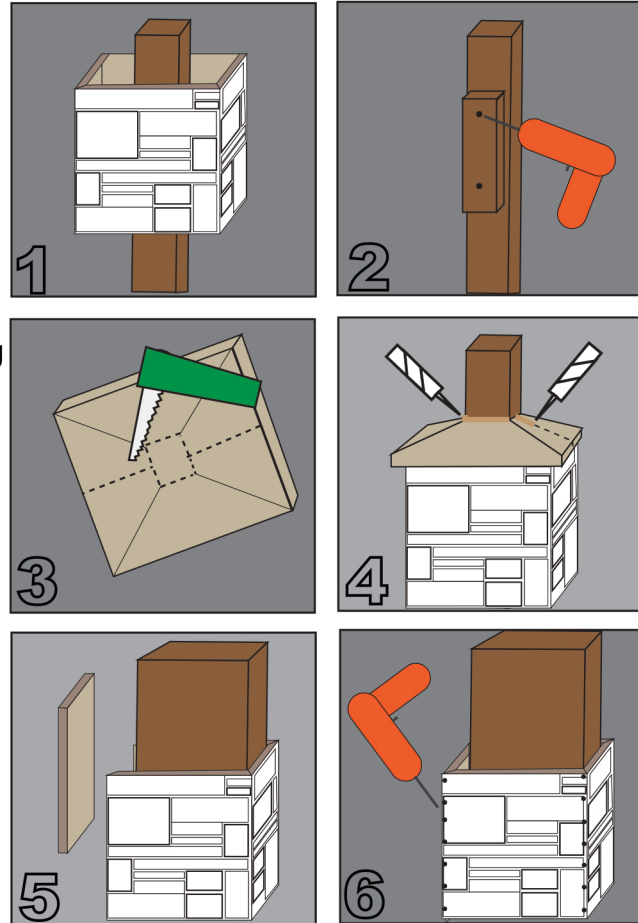

FULL COLUMN

If you ordered a full 4 sided column, just slide it over the top of the structure you are trying to cover. (pic 1) If the column doesn't fit tight you can always use wood and screw to your existing column (pic 2), then after placing the new square column around it will fit snug.

If you are using a cap on top, use a jigsaw to cut a hole that will fit tightly around the inside structure. (pic 3) Screw securely to the square column and use the caulking to cover any seams, then use the touch up paint kit to cover any dry caulking

COLUMN WRAP

If you have an existing structure that your unable to put the full column over, you can order on of our column wrap options. (pic 5) We will ship with the 4th side attached but without the grout, also the screws will be loose to easily remove and reattach. Once the column is snug, screw back together, then grout the seams and once the grout dries, use the touch up paint kit to finish your project! If you need a cap, follow instructions for the Full Column

CONGRATULATIONS! Don't forget to take a picture of your completed project to email us at sales@buyfauxstone.com then write positive review for a \$25 amazon gift card! (details on the back of this page)
